Amendments to the Specification

Amendments are made to the specification as shown in the following replacement paragraphs. The changes in comparison to the immediate prior version are shown.

Please amend paragraph [0068] as set forth below:

[0068] The send unit 62 is shown in FIG. 3[[2]] as being attached to a wall; however, the send unit 62 may be disposed anywhere so long as the receive units 66,68 are within its transmission range. Alternative locations include being secured to the support to which the track 50 is mounted.

Please amend paragraph [0069] as set forth below:

[0069] The send unit further may be disposed in electronic communication with said receive unit by a cable or wire connection of any suitable type for carrying signals from the send unit to the receive unit. In embodiments of the system that include such a connection, the connection is preferably constructed, arranged, and routed to connect the send and receive units through a pathway internal to the overhead structure that supports the receive unit. Such an arrangement and routing provides for aesthetic elegance in the environment of the system and, particularly in a healthcare environment, avoids cluttering of a patient care area. This well complements a variable support assembly by allowing freedom of movement of a display without dangling wires congesting the immediate area of a healthcare provider and patient. This variation is illustrated in FIG. 4, where cable 74 is shown extending between, and connecting in electronic communication, both the send unit 76 with a receive unit in the form of an input jack (not shown) of the electronic display 14, and the send unit 74 with a receive unit in the form of an amplifier embedded in the apparatus 60 and having input and output jacks 78. With additional regard to this variation, the cable leading to the electronic display 14 preferably is disposed internal to at least the swivels [[54]]52, 20, and 28, whereby the cable does not inhibit the range of motion that the electronic display 14 otherwise enjoys.
